

[Pavlograd automatic production lines and machines factory](#) , having a half-century history of its development, is one of the largest enterprises specialized in the production of foundry equipment today. We dispose an entire set of production equipment allowing us to make a full cycle of parts production from iron and steel casting, heat treatment, machining, electroplating up to assembling machines and other machines that meet the highest requirements of the customers

The range of products covers a wide range of mixers for the preparation and distribution of self-hardening mixtures with productivity from 1.6 to 40 t / h, bar send-blasting machine in heated and unheated rigging with a bar mass of 50 kg, molding machines with the maximum size of flask 1200x1000x400 mm, vibrating tables to firm chemically hardening mixtures with capacity from 0.6 to 3 t, pulse forming machines of high and low pressure with flask sizes from 500x400 to 1200x1200 mm, removable flask molding line with the size of half-forms 600x500 - 800x500 mm, bar making lines with volume from 1.5 to 20 dm³ and other equipment for the areas with small scale mechanization.

Since 1995, the plant develops a new business activity - mining equipment repair and spare parts production for it. Over the years we have mastered and overhauled powered support 1KD80, KD90, and so on.

By individual order, the plant produces steel and iron castings on various degrees of complexity, welded steel structures in different forms and sizes, rubber items, and also does machining, heat treatment and galvanization for customer's parts.
